C10G CRACKING HYDROCARBON OILS; PRODUCTION OF LIQUID HYDROCARBON MIXTURES, e.g. BY DESTRUCTIVE HYDROGENATION, OLIGOMERISATION, POLYMERISATION (cracking to hydrogen or synthesis gas C01B; cracking or pyrolysis of hydrocarbon gases to individual hydrocarbons or mixtures thereof of definite or specified constitution C07C; cracking to cokes C10B); RECOVERY OF HYDROCARBON OILS FROM OIL-SHALE, OIL-SAND, OR GASES; REFINING MIXTURES MAINLY CONSISTING OF HYDROCARBONS; REFORMING OF NAPHTHA; MINERAL WAXES [6]

Note(s) [3]

1. In this subclass:
   - groups C10G 9/00-C10G 49/00 are limited to one-step processes;
   - combined or multi-step processes are covered by groups C10G 51/00-C10G 69/00;
   - refining or recovery of mineral waxes is covered by group C10G 73/00.
2. In this subclass, the following terms or expressions are used with the meanings indicated:
   - "in the presence of hydrogen" or "in the absence of hydrogen" mean treatments in which hydrogen, in free form or as hydrogen generating compounds, is added, or not added, respectively;
   - "hydrotreatment" is used for conversion processes as defined in group C10G 45/00 or group C10G 47/00;
   - "hydrocarbon oils" covers mixtures of hydrocarbons such as tar oils or mineral oils.
3. In this subclass, the last place priority rule is applied, i.e. at each hierarchical level, in the absence of an indication to the contrary, classification is made in the last appropriate place.

Note(s) [2006.01]

1. In groups C10L 1/12-C10L 1/14, the last place priority rule is applied, i.e. at each hierarchical level, in the absence of an indication to the contrary, a compound is classified in the last appropriate place.
2. If an additive is a mixture of compounds, classification is made for each compound of interest.
3. A metal salt or an ammonium salt of a compound is classified as that compound, e.g. a chromium sulfonate is classified as a sulfonate in group C10L 1/24 and not in group C10L 1/30.

Note(s) [4, 2006.01]

1. In this subclass, the following terms or expressions are used with the meanings indicated:
   - "lubricant" or "lubricating composition" includes cutting oils, hydraulic fluids, metal drawing compositions, flushing oils, slushing oils, or the like;
   - "aliphatic" includes "cycloaliphatic".
2. In this subclass, the last place priority rule is applied, i.e. at each hierarchical level, in the absence of an indication to the contrary, classification is made in the last appropriate place. Thus, a compound having an aromatic ring is classified as aromatic regardless of whether the substituent(s) of interest are on the ring or on an aliphatic part of the molecule.
3. In this subclass:
   a. metal or ammonium salts of a compound are classified as that compound;
   b. salts or adducts formed between two or more organic compounds are classified according to all compounds forming the salt or adduct, if of interest;
   c. a specified compound, e.g. phenols, acids, substituted by a macromolecular hydrocarbon radical is classified as that compound;
   d. base-materials or thickeners or additives consisting of a mixture for which no specific main group is provided are classified in the most indented group covering all essential constituents of the mixture, for example,
      - a base-material mixture of ketone and amide group C10M 105/00;
      - a base-material mixture of ketone and ether group C10M 105/08;
      - an additive mixture of long and short chain esters group C10M 129/00;
      - an additive mixture of short chain aliphatic and aromatic carboxylic acids group C10M 129/26;
   e. except for aqueous lubricating compositions containing more than 10% water, which are classified separately, classification is made according to the type of ingredient or mixture of types of ingredient (base-material, thickener or additive) which characterises the composition.
      Attention is drawn to the fact that a mixture of essential ingredients characterised by only one of its components, rather than by the mixture as a whole, is not classified as a mixture, e.g., a lubricating composition consisting of:
      - a known base-material and a new additive is classified only in the "additive" part of the classification scheme;
      - a known base-material with both a thickener and a further additive as essential ingredients, which may be individually known or not, is classified as a mixture of thickener and additive;
      - a known base-material with a combination of additives as essential ingredients, which may be individually known or not, is classified in the appropriate place for the additive mixture.
4. Any part of a composition which is not identified by the classification according to Notes (2) or (3) above, and which itself is determined to be novel and non-obvious, must also be classified in the last appropriate place. The part can be either a single ingredient or a composition in itself.
5. Any part of a composition which is not identified by the classification according to Notes (2) to (4) above, and which is considered to represent information of interest for search, may also be classified in the last appropriate place. This can, for example, be the case when it is considered of interest to enable searching of compositions using a combination of classification symbols. Such non-obligatory classification should be given as "additional information".
6. In this subclass, it is desirable to add the indexing codes of subclass C10N.

Thickeners [4]

Note(s) [4]

In groups C10M 113/00-C10M 123/00, the following term is used with the meaning indicated:

- "thickener" is an agent which solidifies other liquid components to form a grease. Solid lubricants consisting of solid components are classified in groups C10M 103/00-C10M 111/00.

113/00 Lubricating compositions characterised by the thickener being an inorganic material [4, 2006.01]

113/02 • Carbon; Graphite **[4, 2006.01]**
113/04 • Sulfur **[4, 2006.01]**

Note(s) [2006.01]

When classifying in this group, any reactant of a reaction product which is considered to represent information of interest for search, may also be classified in the last appropriate place in this subclass. This can, for example, be the case when it is considered of interest to enable searching of compositions using a combination of classification symbols. Such non-obligatory classification should be given as "additional information".

C10N INDEXING SCHEME ASSOCIATED WITH SUBCLASS C10M [4]

Note(s) [4]

1. This subclass constitutes an indexing scheme associated with subclass C10M, relating to:
   - metals and the metal of a compound in group C10N 10/00;
   - the properties of the lubricant composition or constituents thereof in groups C10N 20/00, C10N 30/00;
   - the use or application of the lubricant composition in group C10N 40/00;
   - the form in which the lubricant composition is applied in group C10N 50/00;
   - chemical modification by after-treatment of lubricant constituents in group C10N 60/00;
   - special methods of preparation in group C10N 70/00;
   - special pretreatment of the material to be lubricated in group C10N 80/00.
2. In this subclass, the following terms or expressions are used with the meanings indicated:
   - "lubricant" or "lubricating composition" includes cutting oils, hydraulic fluids, metal drawing compositions, flushing oils, slushing oils, or the like;
   - "aliphatic" includes "cycloaliphatic".

10/00 Metal present as such or in compounds [4, 2006.01]

50/00 Form in which the lubricant is applied to the material being lubricated [4, 2006.01]

50/02 • dissolved or suspended in a carrier which subsequently evaporates to leave a lubricant coating **[4, 2006.01]**
50/04 • Aerosol **[4, 2006.01]**
50/06 • Gaseous phase, at least during working conditions **[4, 2006.01]**
50/08 • solid **[4, 2006.01]**
50/10 • semi-solid; greasy **[4, 2006.01]**

60/00 Chemical after-treatment of the constituents of the lubricating composition [4, 2006.01]

60/02 • Reduction, e.g. hydrogenation **[4, 2006.01]**
60/04 • Oxidation, e.g. ozonisation **[4, 2006.01]**
60/06 • by epoxides **[4, 2006.01]**
60/08 • Halogenation **[4, 2006.01]**
60/10 • by sulfur or a compound containing sulfur **[4, 2006.01]**
60/12 • by phosphorus or a compound containing phosphorus, e.g. P_xS_y **[4, 2006.01]**
60/14 • by boron or a compound containing boron **[4, 2006.01]**

70/00 Special methods of preparation [4, 2006.01]

80/00 Special pretreatment of the material to be lubricated, e.g. phosphatising or chromatising of a metal [4, 2006.01]
